

Mojo Barriers is the leading international supplier of stage barrier systems, setting the industry standards for live events.

Products: The favourite among event organisers looking for a safe, sustainable and cost effective system, Mojo's continual investment in R&D results in proprietary barriers which are proven, adaptable and reliable. As well as aluminium stage barriers Mojo has a vast portfolio of other innovative products designed for use at outdoor and indoor events including turnstile systems, line up gates, bar barriers and a range of accessories.

Crowd management: Mojo combines these independently tested products with an expansive knowledge of crowd management and crowd control, and experienced project managers. Taking into consideration a wide variety of factors, Mojo creates bespoke configurations designed with audience, guest and crew safety as the highest priority.

Offering an international network, combined with local service, Mojo Barriers has been the trusted global stage barrier resource for over twenty years.

## SECURITY FEATURES

## TECHNICAL SPECS

### HIGH FENCING / SIGHTLINE KILLS

Also known as 'sightline kills', high fencing is the installation of 1.20 m high panels on top of the barrier line. This blocks the view of the crowd at certain places preventing unwanted pressure points building at the entrances and sides of stage areas as people tend not to go where sightlines are blocked. In light of crowd control and crowd management, high fencing is an easy way to prevent blockage of entrances and/or exits.

### 5.5° POSITIVE CORNER (WEDGE)

Wedges are narrow 5.5° fixed corner sections. With a width of less than 0.50 m, they are used to slowly curve the entire barrier line, for instance in front of a large stage, shaping it slightly around the stage. Such shaping of the barrier allows for crowd pressure to be turned slightly sideways. It connects to all other barrier sections with a single bolt and has a double brace but no rear step.

### SECURITY WALKWAY

The security walkway is a specially designed, quick to build, seamless system to be placed at the back of the barrier line, including all corners. Normally this barrier line is only outfitted with rear steps on the back. This additional system creates a heightened additional 1.00 m wide working platform behind the barrier line, with no open gaps between the regular rear steps. This allows security and medical personnel better audience observation and access.
